

## AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph [0061] with the following rewritten version:

-- As shown in Figure Fig 9, the boss portion 4e has a regular hexagonal outer shape. The boss portion 4e is fitted rotatably to the spool shaft 16, but is made non-rotatable relative to the spool shaft 16 with a mounting member 56. The mounting member 56 includes a boss-engagement portion 57 to engage non-rotatably with the boss portion 4e, and an engagement member 58 to make the boss-engaging portion 57 non-rotatable relative to the spool shaft 16. The boss-engagement portion 57 includes an interlock recess 57b that has a twelve-point star-like cross section. The interlock recess 57b is formed in a front face 57a of the boss-engagement portion 57 opposing the boss portion 4e. The four circular interlock projections 57d engage with the engagement member 58 provided on a rear face 57c of the boss-engagement portion 57. The engagement member 58 is a disk-like member having at its center a slit 58a configured to engage non-rotatably the chamfered portions 16b of the spool shaft 16. Also provided on its outer peripheral surface are four interlock grooves 58b to interlock with the interlock projections 57d. By fitting the slit 58a with the chamfered portions 16b, the engagement member 58 is fitted non-rotatably to the spool shaft 16. By interlocking the interlock projections 57d with the interlock grooves 58b, the boss-engagement portion 57 is made non-rotatable relative to the spool shaft 16. It should be noted that a washer member 59 made of an elastic material is fitted in the interlock recess 57b of the boss-engagement portion 57. The washer member 59 has a hole 59a having an unstretched or relaxed inner diameter slightly smaller than the outer diameter of the spool shaft 16. By fitting the hole 59a onto the spool shaft 16, back-and-forth movement of the boss-engagement portion 57 and the engagement member 58 is restricted relative to the spool shaft 16. --
